

Salesforce: Gptify Use-Case

USE Case: AI-Powered Salesforce Logging for On-the-Go Business Development

 **Contacts:** PCE&F Business Development (Shooter Starr, Doug Godine)

Background

Business development often happens in a very personal, people-focused setting. Business development colleagues attend live events, hosting intimate coffee chats, join boardroom discussions, and engage in high-touch interactions with prospects and clients. These meetings often yield critical insights: investment preferences, family office structures, liquidity events, philanthropic goals, and potential referral opportunities.

Use Case

AI-powered assistant that automatically captures meeting notes and updates Salesforce records in real time or shortly after each interaction

Workflow

1. **Post-Meeting Capture**

- After a meeting, the business development colleague speaks into their mobile device: “Met with Sarah Chen at the Family Office Summit. She’s interested in impact investing, particularly in climate tech. Potential liquidity event in Q2 2026. Wants to explore direct deals. Referred by Paul Chew.”
- AI transcribes and parses the input.

2. **Data Structuring**

- AI identifies:
 - Contact: Sarah Chen
 - Event: Family Office Summit
 - Interests: Impact investing, climate tech
 - Timeline: Q2 2026
 - Referral: Paul Chew
 - Opportunity: Direct deal exploration

3. **Salesforce Update**

- AI logs the meeting under Sarah Chen’s contact record.
- Creates or updates an Opportunity with relevant tags and estimated close date.
- Adds referral source and meeting context to the activity history.

4. **Follow-Up Suggestions**

- AI recommends next steps: send climate tech deal memo, schedule follow-up in January, notify investment team.

5. **Team Visibility**

- Internal stakeholders receive alerts or summaries via email or Teams message.

Benefits

- Eliminates manual data entry
- Preserves rich client context
- Enhances CRM accuracy and timeliness
- Improves collaboration across teams
- Enables better forecasting and prioritization

Use Case: Relationship 360° View for Pre-Call Briefing

 **Contacts:** PCE&F Portfolio Manager or Institutional Relationship Manager

Background

Use Case

PM's are responsible for maintaining deep, trusted relationships with clients whose financial lives are complex and multifaceted. Before any client interaction—especially a phone call—it's critical to have a holistic view of the relationship: investment history, service issues, client preferences, recent communications, and upcoming activities & goals.

AI-powered assistant that automatically captures meeting notes and updates Salesforce records in real time or shortly after each interaction

Workflow

1. Trigger

- Portfolio manager opens the Relationship 360° dashboard or requests a briefing via voice or mobile app before a scheduled call.

2. Salesforce Data Retrieval

- GPTify pulls structured data from Salesforce:
 - Client profile: AUM, investment preferences, risk tolerance
 - Recent meetings and notes
 - Open opportunities or service tickets
 - Key contacts and family office structure

3. Email Summary via Microsoft Graph API

- Graph API retrieves recent email threads between the portfolio manager and the client (last 30 days).
- GPTify summarizes tone, topics, unresolved questions, and action items.

4. AI-Generated Briefing

- GPTify compiles a 1-page summary:
 - “Client prefers private equity and ESG strategies. Recently asked about Q4 performance. Last email flagged concern about fund liquidity. Meeting note from Oct 10 suggests interest in co-investment opportunities. Opportunity for impact fund still open.”
- Includes suggested follow-ups and talking points.

5. Delivery

- Summary is displayed in Salesforce.
- Optional PDF export for on-the-go review.

Benefits

- Saves time and reduces prep burden
- Ensures no detail is missed before client calls
- Improves personalization and responsiveness
- Enhances internal coordination and follow-through
